Software Engineering Manager | *Process Oriented. Quality Focused.*

Engineering leader with 7+ years of experience building full-stack healthcare and consumer platforms, leading teams of engineers through architectural planning, delivery, and release. Pairing deep technical expertise with a focus on optimizing engineering processes and improving software reliability. Known for cross-functional collaboration, speaking candidly with senior leadership about technical tradeoffs, and raising engineering standards beyond my own team.

Experience

WebPT

2021 - Present

Senior Software Engineer, Team Lead

Remote

- Lead team of 4-7 software engineers owning architecture and delivery of core task management systems for EMR, shipping biweekly releases with 99.9% service availability and 95 Apdex score
- Serve as embedded scrum master, leading sprint planning and retrospectives, raising sprint velocity by 25% and working with cross-functional stakeholders to cut quarterly planning from two days to three hours
- Orchestrate bi-monthly company BDD test process refinement meetings, standardizing practices and driving adoption of testing repository across 100+ engineers to eliminate application defects
- Interview and select near-shore contract engineers for the team, providing annual performance evaluations, and holding biweekly sync-ups with each engineer fostering skill development
- Write custom Cursor AI rules and skills for my team to enforce architectural patterns, automate CSV data mapping, and convert Jira requirements into test suites, boosting team development efficiency by ~20%
- Own the definition of all 40+ FHIR (Fast Healthcare Interoperability Resources) profiles for EHR application and development of the company's HL7 FHIR Implementation Guide
- Implemented AWS SNS/SQS queues to replace legacy cron job, reducing data sync time across applications from over 1 hour to ~1 second for 17,000 daily messages, and cutting database CPU utilization by over 50%
- Integrated 20+ Mirth channels into CI/CD pipelines with automated testing, reducing QA engineering time costs and improving interoperability across systems

Green Light Labs

2019 - 2021

Software Developer

Camarillo, CA

- Built and launched Electrifyze, a white-labeled React learning platform, as the sole engineer, driving product requirements, serverless Firebase architecture, QA, and release, scaling app to thousands of users in first year
- Programmed car comparison software for iOS and Android, creating 50+ mobile app releases
- Trained and supervised QA testing intern, uncovering 100+ legacy bugs, improving application stability
- Spearheaded project creating 20 computational functions for vehicle ownership cost calculators

Core Skills

- Team Management, Agile and Scrum, Technical Roadmap & Architecture, Developer Mentorship
- TypeScript, JavaScript, Python, Java, SQL; React.js, Apollo Server, GraphQL; Jest, Cucumber; Cursor AI
- AWS (Amplify, Lambda, SQS, SNS, EC2, RDS, API Gateway), Firebase, Docker, CI/CD pipelines, HL7, FHIR

Education

University of California - Berkeley

Studies in Computer Science

Certifications

AWS

Certified Cloud Practitioner
